ABSTRACT OF THE DISCLOSURE

The present invention discloses a method and system for providing an education decision support library to enable user access to information, over a processor based network. The information assists the user in making an administrative decision. The

5   method includes the steps of loading operational data from one or more sources into a database; providing one or more analytical tools that enable a user to manipulate the operational data; and accessing the one or more analytical tools over the processor based network to assist in an educational environment.
